

NORTON

NORTON A475 NO-FIL DURITE PAPER DISCS

NEW

For Hard to Sand Surfaces

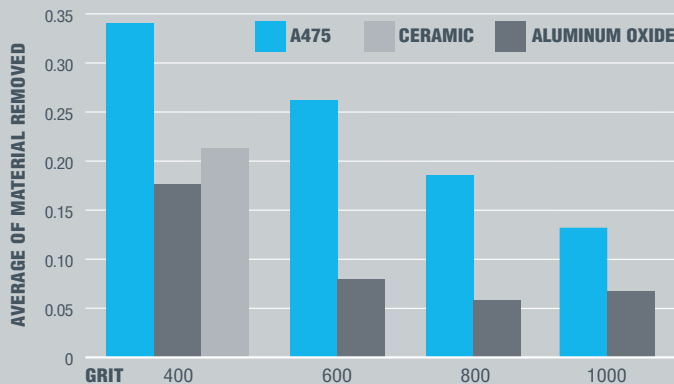

A475 discs are specifically designed for superior sanding and finishing of hard surfaces. Ideal for use on tooling gel coats, conventional gel coats, hard composite substrates, and abrasion-resistant coatings.

Utilizing silicon carbide grain, the hardest manmade abrasive next to diamond, ensures easy penetration of the hardest surface while the anti-clog coating resists loading for longest usable product life. And the durable, fiber-reinforced, latex paper backing provides flexibility and resistance to tearing.

A475 easily outperforms conventional aluminum oxide and ceramic products alike on these hard to sand surfaces with reduced abrasive usage and, more importantly, reduced operator time to complete the sanding step. Not only is sanding efficiency improved but these discs also generate a better surface finish, grit for grit, when compared to aluminum oxide designs.
